## Exclusive Provider for the Uni-8 System

### UNI-8™

Uniline's high quality stainless steel cable based system offers customers a second option where factors such as system layouts adversely affect costs, or where stainless steel is simply your preferred choice.

- Aesthetically pleasing 316 stainless steel components
- Load re-orientating intermediate brackets
- In line energy absorbers protect buildings and structures
- Spans up to 12m between support anchors
- Electro-polished components give long term corrosion resistance

No matter which product you choose, the same high standard of production, design and installation will be provided. In addition systems have the following similarities:

- All system designs are bespoke and consider individual customer requirements
- A range of anchors to suit different structures and building fabrics are available
- Bespoke anchors for special projects can be accommodated
- All systems offer discreet and unobtrusive solutions
- All systems can navigate corners and obstacles
- All systems utilise the Unigrab™ or Uniwheels™ attachment device for continuous hands free movement around the system
- All systems are designed using the Uniline for Windows™ simulation software, which accurately predicts the performance of your fall protection system including selected Personal Protective Equipment such as harnesses and lanyards
- All systems come with the same high level of support from our Approved Systems Integrators
- All Uniline Systems ensure that safety can be a cost effective addition to a building or structure
- All systems conform with EN795 and carry the CE mark.
